#### **SMOKE DAMPER - BMSD SERIES**

### SMOKE DAMPER

CLASS I - 350°F - CLASS I - 250°F - CLASS 2 - 250°F

MODEL BMSD / MODEL BMSDLT

#### STANDARD CONSTRUCTION

Standards: Designed and tested in accordance with UL555S. Meets NFPA 90A and SMACNA

requirements for fire & smoke dampers.

Application: For dynamic smoke management systems.

Frame: I33mm Roll formed hat-shaped made of I.4mm thick galvanized steel with reinforced

corners, having integral bracing and 90° perpendicular overlap at a corner.

Blades: Roll formed 3 V-shaped made of I.4mm thick

galvanized steel.

Bushes: Bronze bushes.

Axles: %" Square axles made of galvanized steel.

Linkage: Mechanical and concealed in frame.

Drive Mechanism: 1/2" Round Jack Shaft made of galvanized steel.

Jamb Seals: Stainless steel jamb seals.

Model BMSD & BMSDLT

Blades Seals: UL listed high-temperature (exceeding 450° F) Silicone blades edges seal/gasket manufactured in accordance with UL555S requirements.

manaractarea in accordance with 00333 requirements.

Actuators: A UL listed HONEYWELL 3.4 Nm actuator for each single section damper up to 20"X20"

A UL listed HONEYWELL 9 Nm actuator for each single section damper up to 36"X36". A UL listed BELIMO 20Nm actuator for each single section damper up to 36"X36"

Sleeve: Sleeve made of 400mm depth and I.Imm thickness galvanized steel.

Mounting: Vertical/Horizontal mounting.

Air Flow Rating: 2000 FPM / 4 IWG.

Leakage: Class I @ 350°F

Class I @ 250°F Class 2 @ 250°F

Sizes: Single Section: Max. 36" X 36"

Multiple Section: Max. 72" X 72"

CLASS I - 350°F - CLASS I - 250°F - CLASS 2 - 250°F

MODEL BMSD / MODEL BMSDLT

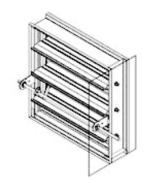

## **OPTIONS**

- ☐ Without Sleeve. With one side plate only (Model BMSD-XS & BMSDLT-XS).
- ☐ Round spigots for model BMSD/R & BMSDLT/R.

## **PERFORMANCE DATA**

#### Note:

Pressure drop test was done at an independent laboratory in accordance with the AMCA 500-D standard on 36"X36" sample.

#### INSTALLATION

**(F**)

# INSTALLATION AND OPERATING INSTRUCTIONS FOR MODELS BMSD, BMSDLT, BMSD/R & BMSDLT/R

- 1) The damper (1) should be installed vertical, centrally and resting on the bottom opening within the surrounding masonry / gypsum wall (7). Actuator should be out of wall / gypsum partition as shown in (figure 1).
- 2) The damper (1) should be installed in a rectangular galvanized steel sleeve (2) with a minimum thickness of 1.1mm. This sleeve should be attached to the damper using M6 bolts (5) and spaced at not more than 110 mm centers and 30 mm from corners.
- 3) Clearance requirements for damper sleeves within a wall opening are based on 1/8 inch per foot (10mm per meter) of width or height unless otherwise stated in the listing of the assembly.
- 4) The sleeve ( 2 ) should be of suitable length to extend through the wall to enable the fitting of the cover angles and ductwork. Minimum of 90 mm from the wall and total depth of the sleeve should not exceed more than 510 mm.
- 5) The retaining angles (3) should be attached to the sleeve by 6 mm dia (4) bolts at a maximum of 110 mm centers, and should form a complete frame around the sleeve and cover over the expansion space (6) required between sleeve and wall opening. The four corner of the retaining angles are not to be welded. The bolts connecting the retaining angles to the sleeve to be 30 mm maximum from the corners. Retaining angles will be send in loose parts.
- Note: The retaining angles bolts should be out of the area of the damper frame.
- 6) The retaining angles (3) should be of such a size as always to form an overlap with the wall by 25mm minimum and should be manufactured from a minimum size of 35 x 35 x 1.5 mm Gl.
- 7) The duct-sleeve connection to be of as per listed in UL 555s. Connecting ducts shall not be continuous and shall terminate at the sleeve. Installation shall comply with NFPA 90A.
- 8) All fixing of frames must be positioned clear of the damper blade path so as not to impede proper closure.

MODEL BMSD / MODEL BMSDLT

#### INSTALLATION

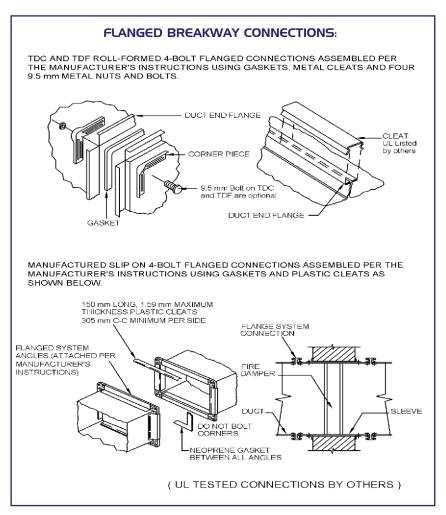

#### **EXPLODED ASSEMBLY** WITH SLEEVE:

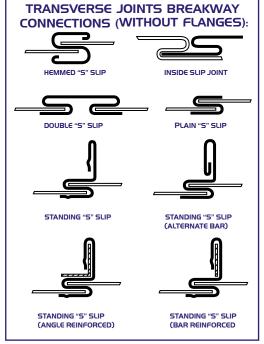

#### **ASSEMBLY PROCEDURES:**

- I- Fix the damper A into the sleeve B matching their hole provision using rivets/bolts.
- 2- Fix the damper with sleev into the concrete/gypsum wall opening E using the front retaining angle C 35X35 and matching their hole provision using M6 Hex bolt & nut. The sleeve B must overhang by a minimum of 90mm and maximum of 152mm. Opening size should have clearance of 3mm per 305mm of width and height.
- 3- Finally, when the subassembly is already fitted to the wall, fix the back retaining angle D 35X35 using M6 Hex bolt & nut.
